Your introduction to

With a range of digital tools designed to help you better manage, assess and measure your farm practice through the seasons, MyFarm is designed to help growers increase yields, reduce expenses and farm more effectively.

What's more, Frontier's digital support team are always on hand to offer help and advice, so you can be assured that any expertise and support you require is never more than a phone call away.

As technology and legislation change, MyFarm will continue to evolve and deliver new and innovative solutions to help growers optimise their performance and adapt to future challenges as they emerge.

MyFarm ensures that Frontier customers are always best equipped to optimise their crop performance, no matter how the farming landscape changes.

How does it work?

MyFarm is a suite of digital tools separated into easy-to-navigate applications designed to support you with different aspects of farm management, precision farming and sustainable crop production. These applications, their functions and benefits are detailed throughout this brochure.

What are the benefits?

MyFarm helps you gain better insight into your farm business and crop performance as well as giving you access to a range of tools that can help you reduce your expenses and farm more sustainably.

- Easy access to key Frontier documentation such as invoices and grain contracts
- Real-time visibility of grain markets with the ability to set price alerts and trade grain instantly
- Nutrient management – create application maps
- Field scouting – record evidence for environmental schemes
- Team working – share information with your agronomist or farm team
- Access to Oxbury, the UK's only specialist agricultural bank
- Gain insights into your farm business with advanced data analysis tools
- Discounted access to Greenlight Grower Management or free access for agronomy serviced customers.

You can also independently trade grain, create application maps, gather evidence for ELMs and more, with 24/7 access to every application.

What does it cost?

A basic MyFarm package is free for all Frontier customers, although some of the services within MyFarm are chargeable.

Look out for the tools marked **FREE** in this brochure to explore everything you can access for free as a Frontier customer.

Our support team

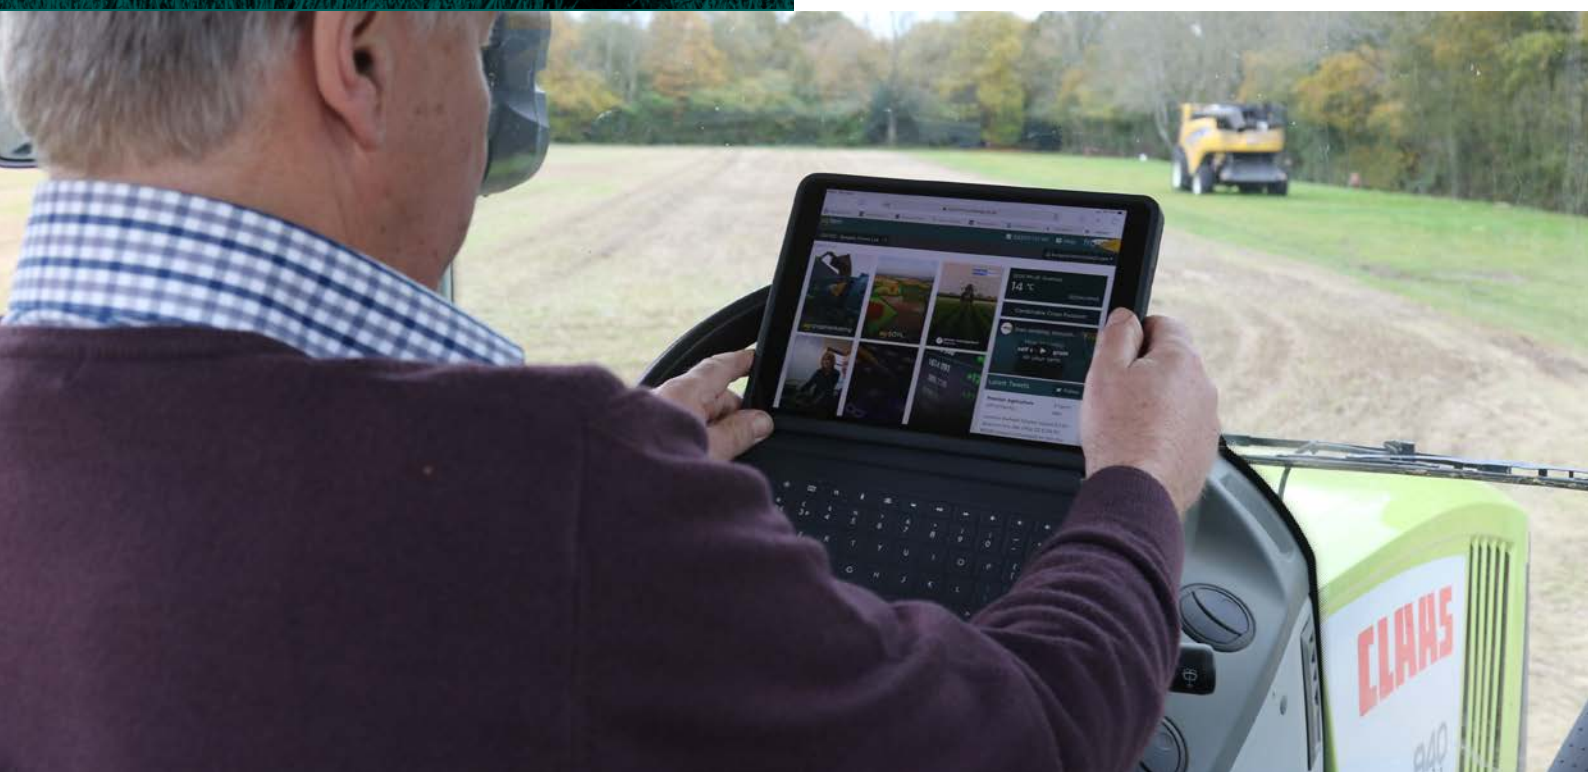

Our digital support team is here to help you get the most from your MyFarm account and answer any questions you might have.

Contact us today

Monday - Friday 8.30am - 5.00pm

Greenlight Grower Management/MyRecs

Frontier agronomy customers can receive Greenlight Grower Management (GLGM) free of charge, saving £265/year on a standard subscription. Download the Frontier MyRecs application to record to your GLGM account on-the-go.

- Work online via the web in your office or offline in the field with the mobile iOS app
- Share farm, field and crop data with all your stakeholders
- Access crop input recommendations and application records in real time
- View your crop activity and costings at your convenience
- Map fields and geo-locate inspections with ease
- Easily order crop inputs using the integrated ordering module.

The screenshot displays the GLGM web interface. At the top, a 'Fields' section shows 'Wallace' with 'W Wheat' and 'Warrior' crops, totaling '123 ha'. Below this, a 'Harvest Products' table lists 'W Wheat' with a quantity of '1.9 tonnes /ha', a price of '£ 0.00/tonnes', and a total of '23.4 tonnes'. The 'Operation Details' section includes dropdowns for 'Operation' (Harvesting), 'Operator' (Select an Operator), 'Primary Machine' (Select Machine), and 'Secondary Machine' (Select Machine). It also features input fields for 'Start Date & Time' (07 Jun 2018 11:00), 'End Date & Time' (26 Jun 2018 12:00), 'Duration (hr:min)' (00:00), 'App Growth Stage' (Select Growth Stage), 'Harvest Complete?' (Yes/No), 'Wind Speed (kph)', 'Direction' (Select), 'Temperature (°C)', and 'Humidity (%)'. A 'Show Costs' button is visible in the top right of the harvest products section.

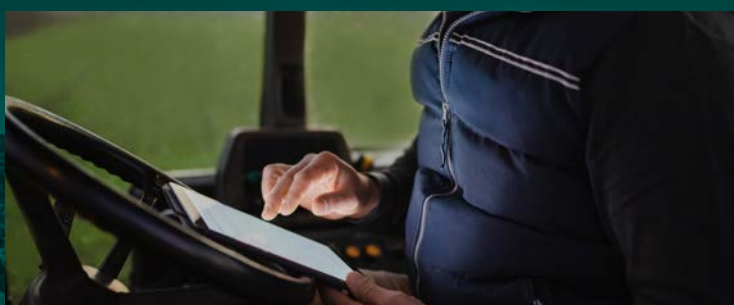

Free for all Frontier customers

Banking

Oxbury provides British farmers the specialist lending they need to run their farms, as well as savings accounts exclusive to those who back British agriculture. Through MyFarm, you can access your Oxbury banking portal where you can view your account details.

myfarmAnalytics

Keep track of this season's costs and sales with up to date information throughout the season.

In Season Tracker

With MyFarm Analytics Tracker tool, review and manage this season with
more ease than ever before.

Actionable in-season insight and decision-making tool. Create budgets, track costs and
monitor your sales positions with ease throughout the season.

Put your data to work, all in one easy-to-navigate platform

Scan for
a demo

View sales contracts and tonnes remaining in store, all in one place

Instant crop overview of costs and sales to date

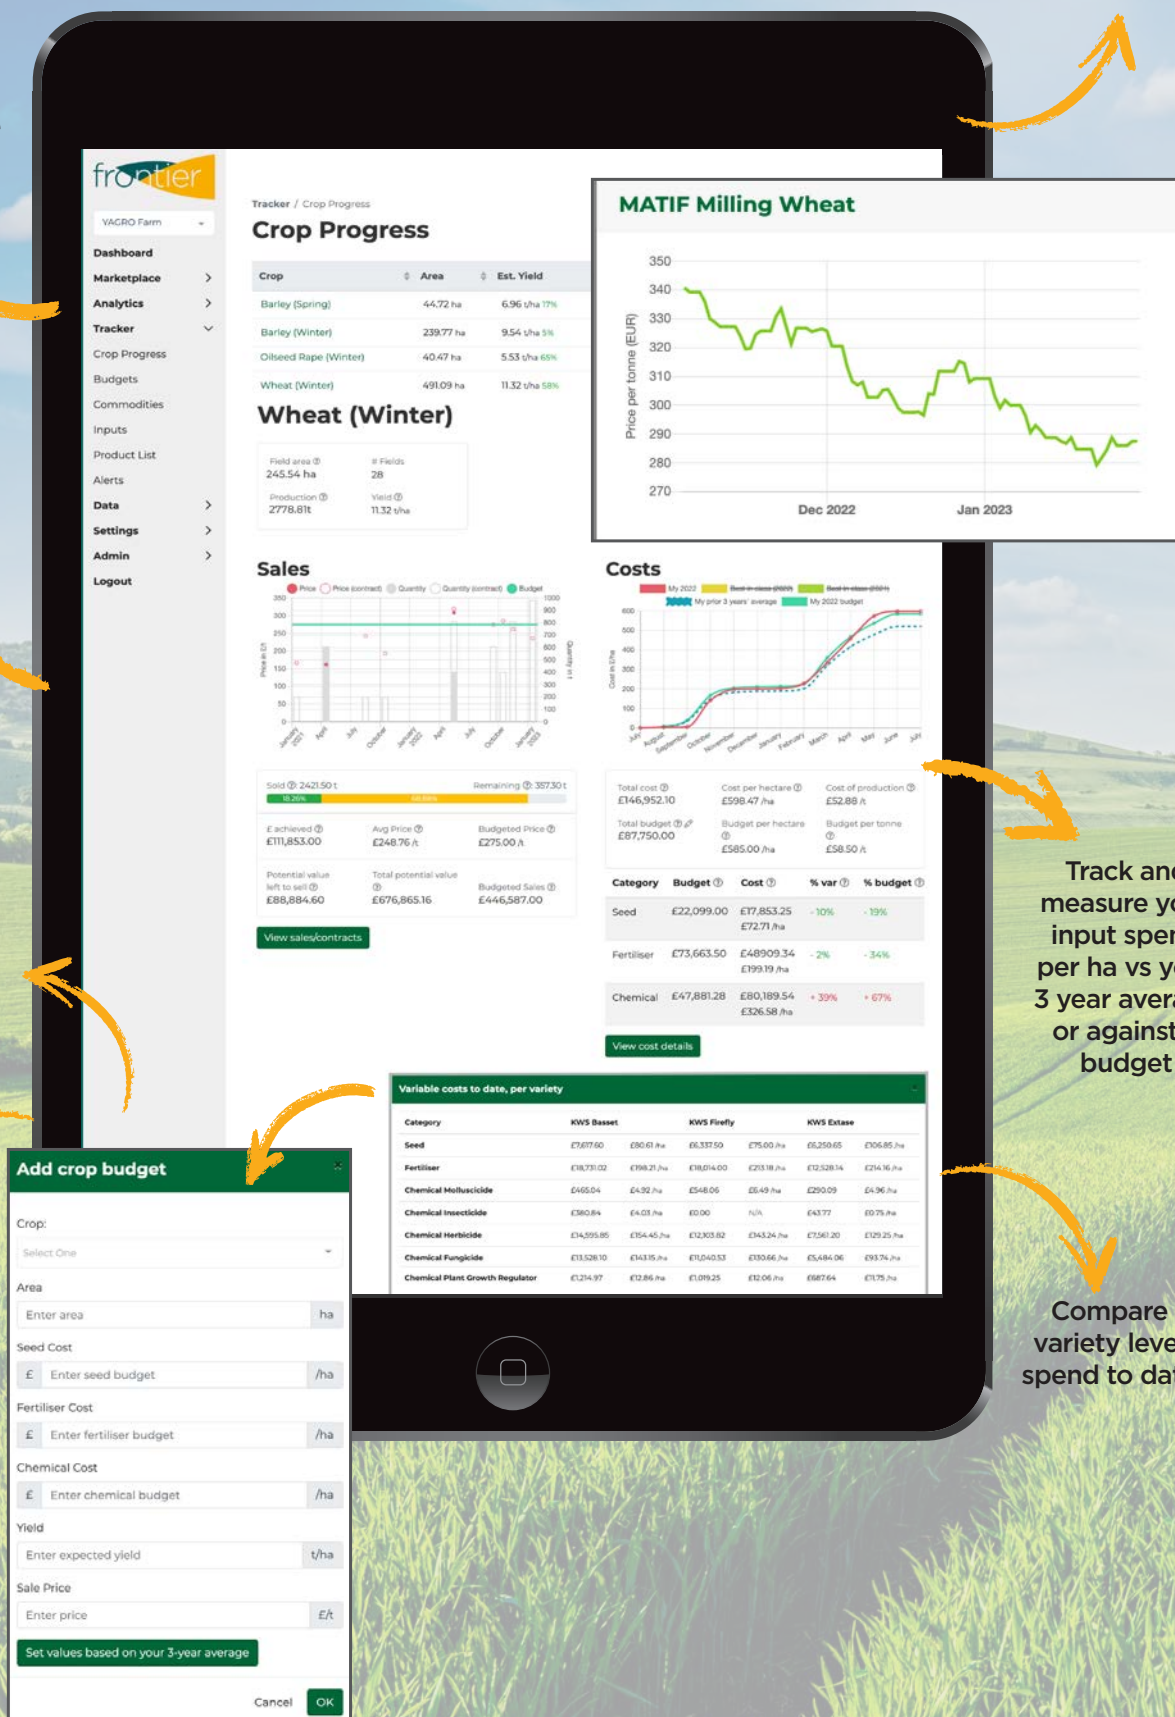

Monitor and improve your overall sales strategy

Build and edit a crop budget in seconds to explore financial outcomes of different budgeting options

See your sold positions including contracts, instantly accessible on any device

Track and measure your input spend per ha vs your 3 year average or against a budget

Compare variety level spend to date

Precision Crop Production

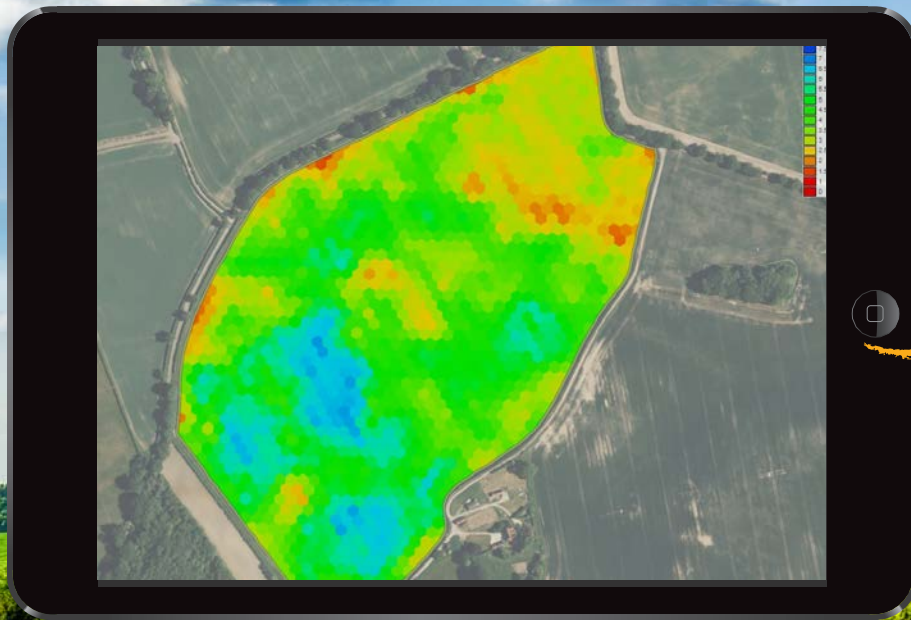

Available as part of MyFarm, MySOYL allows growers and advisors to view and analyse spatial data. With its intuitive interface, MySOYL makes it easy to add, retrieve and alter information and allows accurate and effective modelling to test scenarios without the need to step outside.

With all of this data in one place, growers are able to make intelligent, informed and most importantly, more profitable business decisions. The information generated can be compared, reviewed and analysed, taking a long-term look at trends to tailor future plans to meet the exact needs of the business.

Call us on 03330 141141
or email digitalfarmssupport@frontierag.co.uk

Nutrient Management

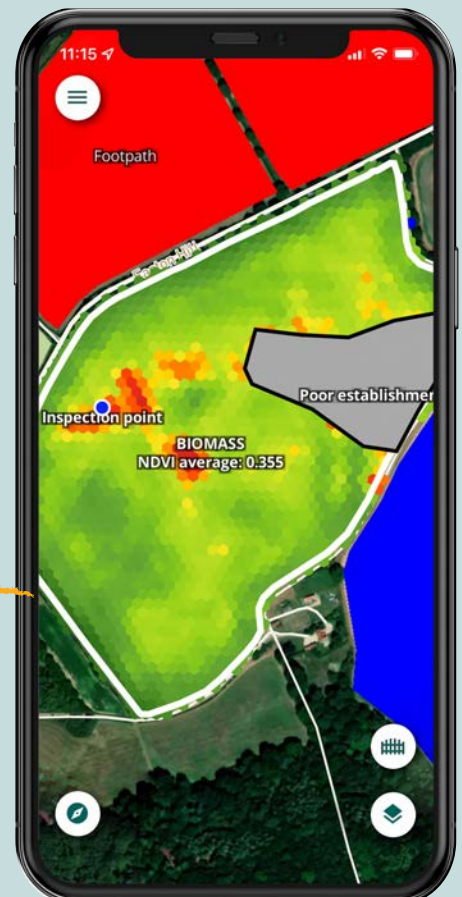

Through MySOYL you can visualise your soil data to understand soil health and inform your nutrient and management strategies. MySOYL can be used to create variable rate application plans for use with a spreader, sprayer or drill.

See a visualisation of nutrient uptake across your field

The biomass imagery helps eliminate over-application, reducing your input costs whilst engaging in more sustainable practices.

- Viewing cropping maps
- View nutrient and soil testing maps
- Analyse and view up to 8 data layers in one view
- Create variable rate seed maps for use with a spreader, sprayer or drill
- View biomass imagery
- View yield maps.

View biomass imagery that uses colour to show green cover and growth stage

Field Scouting

MySOYL mobile app combines field-scouting features with an intuitive access to detailed field mapping data.

Record areas you have scouted and label their features

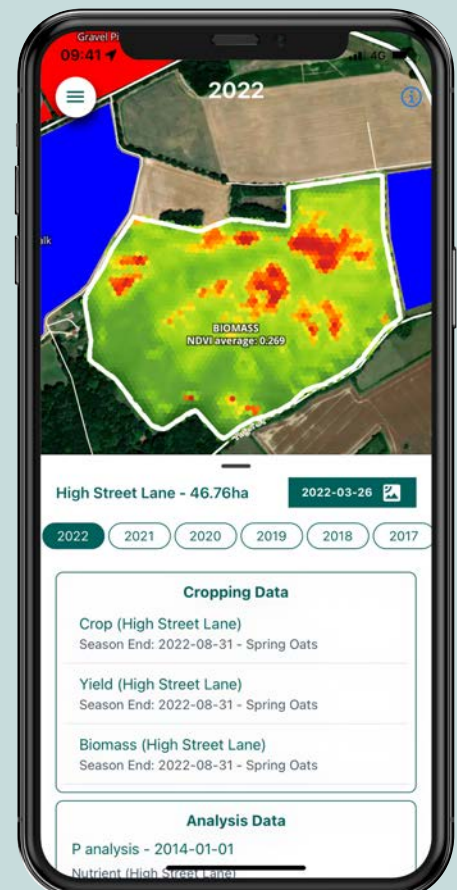

- Use the app in field to capture evidence of your conservation and stewardship activity in real-time.
- View your field mapping data in real-time while crop walking - enjoy instant access to biomass imagery, soil nutrient maps, soil type maps, yield maps and environmental scheme maps.
- Record and capture field-walking observations, using GPS to log precise locations.
- 'Pin' points of interest, map areas and measure distances, while adding comments and photographs to share with agronomists and other staff.
- Create your portfolio of evidence for Stewardship schemes or agri-environment projects.

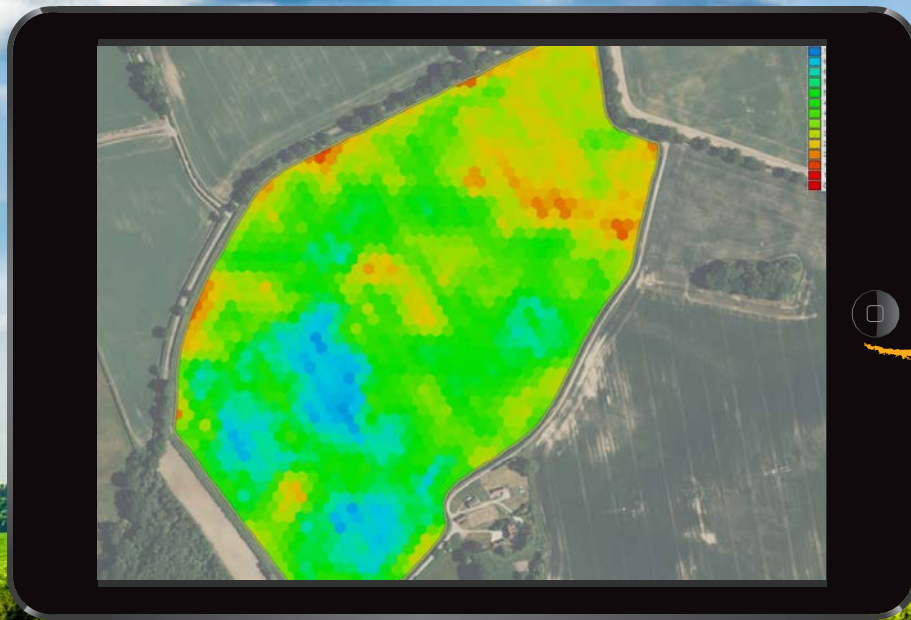

Visualise nutrient uptake across your field
to inform your nutrition planning

Call us on 03330 141 141

or email digitalfarmssupport@frontierag.co.uk

Crop performance

See your yield data and review crop performance

Access key data visualisations to inform your crop nutrition planning

- Biomass imagery
- Nutrient and pH maps
- Soil scan data, soil type and plant establishment
- Crop performance/yield
- In-field observations imported from the MySOYL mobile app.

See a visualisation of nutrient uptake across your field

Environmental management

MySOYL is an essential tool for collecting evidence to support Environmental Land Management schemes (ELMs).

Record how your land is being used in Environment Land Management schemes (ELMs)

The MySOYL environment manager tool allows you to combine all aspects of your crop production and environmental management into one simple-to-use dashboard

- Update Farm Environment Records or Countryside Stewardship agreements
- Explore and test a range of scheme options
- Plan every aspect of your sporting activity, from pegs to conservation plots
- Build a 'natural capital' asset map of your business and record your progress
- Ensure compliance and prepare for inspections.

See your Biomass data and review in field variation

Call us on 03330 141 141

or email digitalfarmsupport@frontierag.co.uk

The MySOYL

MySOYL is now also available on-the-go as a mobile app. In the MySOYL mobile app, you can view your field data while in field, using GPS to pinpoint your precise location. In addition, the mobile app includes a range of field-scouting tools to support crop walking and environmental land management.
