

Helping you get the most from Frontier's farm management platform

Welcome the eighth edition of MyFarm Tips & Tricks 2020.

In this edition:

- How to install MyRecs on your Apple device
- How to apply a plan in MyRecs
- How to change your background map

[Access the Tips & Tricks library](#) to view or download issues already published.

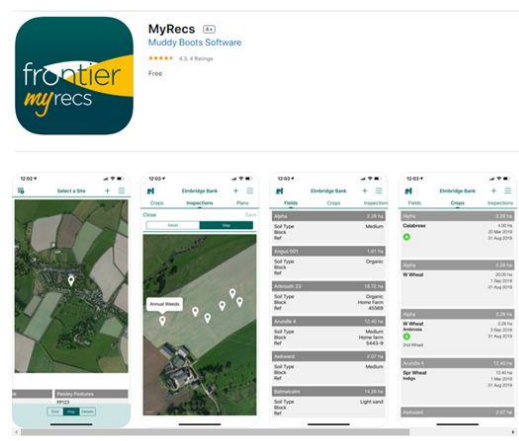

Keeping MyFarm on the move, this week we talk about how to access Greenlight Grower Management using our MyRecs app to record applications in the field.

By using MyRecs, which is the app version of Greenlight Grower Management, you can save time, work offline and avoid data duplication.

Meanwhile, our MySOYL tip of the week demonstrates how to change the background of your maps, allowing you to toggle between various options throughout your session.

Install MyRecs on your Apple device

If you haven't already, you can download MyRecs on either your iPad or iPhone from the [AppStore](#).

The MyRecs app will appear on your Home screen once you have successfully downloaded it onto your device.

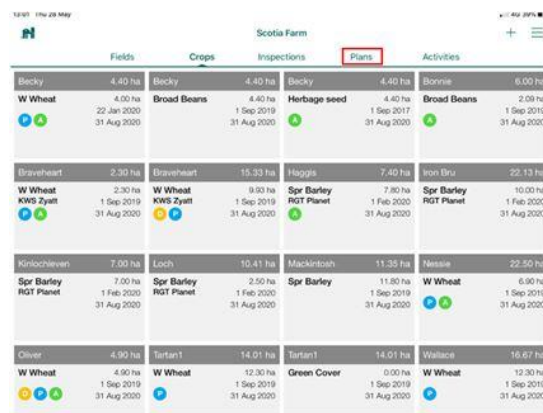

How to apply a plan in MyRecs

To navigate to the plans section, you'll first need to select a site.

Next, you'll need to select 'Plans' from the toolbar at the top of the screen.

Then, you'll need to complete the following steps to apply your plan.

At this point, amendments can still be made to the plan, such as changing the application rate or removing a product.

- Once you are satisfied that all products and application rates are correct, you can scroll down the page and complete all of the relevant application details such as the 'Operator' field, the start and end date and time and the operation cost. The latter will auto-populate with the last figure that was logged if you've used this recommendation before.

Once you have selected 'Save', you will notice the plan status will change from 'Published' to 'Applied'.

If you added or removed a product and/or amended the application rates, these will be displayed in red text on the main recommendations dashboard to signify a change from the original recommendation.

MySOYL – How to change your background map

Did you know that MySOYL offers you a selection of background maps? Perhaps you need a map with road names displayed to help a contractor find a field, or maybe you just want to see the contour lines on an OS map.

To change the background, simply enter the 'Map view screen' from the right-hand toolbar.

Then select 'Map settings' from the left-hand toolbar.

Now, it is simply a case of selecting your desired map background by sliding the toggle switch to 'On' for the map style you'd like to see.

Furthermore, the opacity of the map can be changed using the slider. And, if you don't want to see field labels, simply slide the 'Map labels' switch to 'Off' within the map settings.
